Request your 3000 SERIES™ binder today!

The 3000 Series™ is a high volume trench drain system designed for highway traffic and airport applications. The chemically resistant fiberglass channels allow up to 3,000 GPM of water with proper installation and slope; drainage channels are available with a 1% slope. For special situations, .5%, .75% and 1.25% slopes can be ordered to suit a range of site conditions.

The 3000 Series™ channels come in 8 feet lengths with integral zinc plated or stainless steel frames to add durability. Lightweight channels allow for quick installation. The 3000 Series™ drain can maintain a continuous slope up to 240 feet. End and bottom outlet adapters connect the drain system to standard 8" PVC piping.

3000 Series Cheat Sheet

Channel Length	8 feet (96")
Channel Width	8.63"
Outlet Size	8"
Available Slope	.5%, .75%, 1%, 1.25%
Max. Flow Rate	3000 GPM

Better Grating Options

Trench Drain Systems enhanced the 3000 Series™ with an updated list of grate options with seven standard options. The system offers grates to meet Class B – F loading.

Choose among three heavy-duty ductile iron grates for Class D and Class F loading. For commercial projects, pick from fiberglass, galvanized steel or stainless steel grating.
